#### CR 431

#### (JIM HOGG ROAD – LINDALE CITY LIMITS TO I.H. 20)

#### PROJECT DESCRIPTION

Pavement improvements for this project shall consist of the following work items and/or categories. This description may not include all the work items that are required for this project, whether the items are paid or subsidiary to pertinent items.

#### CR 431 – JIM HOGG ROAD:

- Cross-culverts shall be repaired and extended and/or replaced as shown in the plans and/or as directed by the County Engineer. Contractor will match grades and flowlines with existing culvert elevations, or as directed by the County Engineer in the field.
- Rework the existing pavement structure within the limits as designated and/or as directed by the County Engineer. Initial rework of the existing asphalt pavement and base material shall be to a total depth of ten inches (10") utilizing Item 251, Type D.
- 3. Cement treatment of the scarified area shall be to a depth of ten inches (10"). Cement is to be applied at a rate of 32 LBS/SY. The cement treated area shall be compacted by ordinary compaction methods. After treated area has cured, the surface may be primed as directed by the County Engineer or his designee.
- 4. HMAC overlay of the widened roadway shall include sweeping the pavement surface and the application of a tack coat immediately prior to the placement of a Type "D" HMAC surface course with a final minimum thickness of two inches (2"). Turnouts and radii of intersecting county roads shall be overlaid as part of this project and/or as directed by the County Engineer.
- 5. Upon completion of the HMAC overlay, the pavement edges shall be backfilled using the excess excavated material from the pavement widening. Excess material may be utilized for ditch maintenance activities and/or disposed of as directed by the County Engineer.
- 6. Item 132, Embankment, is designated for use for the construction of the proposed headwalls where the existing pipes have been undermined and/or the roadside ditches have been eroded. Use of clean excavated material from the roadway widening may be used for this bid item.
- Existing mailboxes will be temporarily relocated during construction and replaced upon completion of widening and paving operations.

Access by property owners shall be maintained throughout this project. Closure of the roadway for critical work items shall be allowed but limited as much as possible. Contractor shall notify affected property owners prior to such closures.

Final cleanup of all work areas shall be made prior to final acceptance of the project.

Prospective Bidders are expected to inspect the site of work and to inform themselves regarding all local conditions.

#### PROJECT DESCRIPTION

Pavement improvements for this project shall consist of the following work items and/or categories. This description may not include all the work items that are required for this project, whether the items are paid or subsidiary to pertinent items.

#### CR 178 (FM 2868 to CR 168):

- Preparation of Right-of-way shall consist of cleaning the edges of the roadway and removal of vegetation.
- Rework the existing pavement structure within the limits as designated and/or as directed by the County Engineer. Initial rework of the existing asphalt pavement and base material shall be to a total depth of ten inches (10") utilizing Item 251, Type D.
- 3. Cement treatment of the scarified area shall be to a depth of ten inches (10"). Cement is to be applied at an estimated rate of 20 LBS/SY. The cement treated area shall be compacted by ordinary compaction methods. After treated area has cured, the surface may be primed as directed by the County Engineer or his designee.
- 4. HMAC overlay of the widened roadway shall include sweeping the pavement surface and the application of a tack coat immediately prior to the placement of a Type "D" HMAC surface course with a final minimum thickness of two inches (2"). Turnouts and radii of intersecting county roads shall be overlaid as part of this project and/or as directed by the County Engineer.
- 5. Upon completion of the HMAC overlay, the pavement edges shall be backfilled using the excess excavated material from the pavement widening. Excess material may be utilized for ditch maintenance activities and/or disposed of as directed by the County Engineer.
- 6. Existing mailboxes affected by the construction will be temporarily relocated during construction and replaced upon completion of widening and paving operations.
- 7. Nominal construction dimensions are as follows:
  - a. Cement Treatment: 26 Feet
  - b. HMAC Placement: 25 Feet

Access by property owners shall be maintained throughout this project. Closure of the roadway for critical work items shall be allowed but limited as much as possible. Contractor shall notify affected property owners prior to such closures.

Final cleanup of all work areas shall be made prior to final acceptance of the project.
